## WORK EXPERIENCE

### Senior Test Automation Developer Anritsu Company

Bucharest, Romania (remote)  
Telecommunications Electronics Equipment Company

01/2023 - Present

- Develop and maintain Python-based automation frameworks using Selenium for telecom software.
- Configure and support automated test environments and integrations with CI pipelines.
- Define automation concepts, specifications, and test documentation aligned with product requirements.
- Execute automated suites, analyze results, and report defects and test status.
- Analyze test results, log defects with clear reproduction steps, and provide structured test status reports to development and management teams.
- Collaborate with distributed development teams to reproduce and investigate issues.
- Provide technical mentoring and guidance to Test Automation Engineers.

### QA Automation Engineer Ness Digital Engineering

Iasi, Romania (remote)  
Information Technology & Business Planning Services Company

07/2021 - 01/2023

- Built automated tests in Robot Framework and Python for web and Android mobile applications.
- Automated Android applications with Appium on real devices and emulators.
- Implemented Selenium-based end-to-end tests and integrated them into existing frameworks.
- Created and maintained Jenkins jobs and pipelines for continuous testing.
- Contributed to standardizing QA processes and improving automation practices.
- Produced test reports and supported release decisions with system-level evaluations.

### QA Automation Engineer Continental Automotive Romania

Iasi, Romania  
Research & Development Automotive Company

09/2012 - 01/2018

- Participated in testing and deployment of automotive software, covering functional and system-level validation.
- Worked with development and test teams to design robust test solutions for performance and scalability.
- Developed and executed comprehensive test plans, test cases, and test scripts to support component, integration, and system testing activities.
- Prepared and executed test plans, test cases, and scripts for component, integration, and system testing.
- Reviewed requirements for testability and contributed to test strategy and risk identification.
- Documented test procedures and work instructions according to internal quality standards.
